DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species:

I. Species of the embodiment disclosed on page 5, paragraph [0012]; in particular, the invention that provides a method, program product and system for performing automated finishing in a commercial printing environment including a designer location and a print service provider location, where the method comprises: creating a production ready file at the designer location using updated device configuration information from the print service provider location, where the production ready file includes finishing instructions, submitting the production ready file to the print service provider location via an electronic network, receiving a printed output of the production ready file and finishing the printed output at a finishing device in accordance with finishing instructions from the production ready file.

II. Species of the embodiment disclosed on page 5, paragraph [0013]; in particular, the invention that states provides a method for managing workflow in a commercial printing environment including a designer location and a print service provider location, where the method comprises creating a press ready file at the designer location using updated device configuration information from the print service provider location, submitting the press ready file to the print service provider location via an electronic network, verifying, at the print service provider location, that the press

ready file will print at the print service provider location as designed at the designer location and, if not, correcting the press ready file to ensure printing substantially as designed; and performing automated finishing using, if created, the corrected press ready file, else using the verified press ready file.

The species are independent or distinct because claims to the different species recite the mutually exclusive characteristics of such species. In addition, these species are not obvious variants of each other based on the current record.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lennin R. Rodriguez whose telephone number is (571) 270-1678. The examiner can normally be reached on Monday - Thursday 7:30am - 6:00pm EST.
